**1<sup>st</sup> Multinational Congress of  
Military Dentists**

**M+H**  
Medizinische Hochschule  
Hannover

**21.- 23. August 2018  
Medical High School Hannover**

## Invitation

Dentistry is in constant progress and develops continuously. As a result, ever new procedures (e.g. the digital work process) and materials (e.g. PEEK, Ceramics, ) are applied. Only regular further education and intensive mutual exchange with colleagues ensure that knowledge will be transferred across the board. In doing so, military (dental) -medicine is orientated towards the guidelines from science and research, but always has to view them in the context of the specific functions of the service members and include them in therapy and the evaluation of its own actions. Against this backdrop, exchanges and open dialogues within the framework of a specialist conference are tried and tested means and considered to be productive.

From 21 August to 23 August 2018, military dentists in Europe will assemble for 2 days in Hannover. The venue of the congress will be the Medical High School Hannover, dental clinic. On the night of the arrival, an informal get-together at the officers' club at Emmmich Cambrai Barracks, called "icebreaker", will provide the opportunity for a first exchange/ getting acquainted. During this congress, current aspects of dentistry from the fields of conservative dentistry, prosthetics and surgery will be presented, discussed and explained, in particular with regard to military medicine. Suitable speakers could be engaged from Hannover Medical School (MHH).

In the MHH the dental industry will accompany the congress by providing information for the participants during the breaks in form of an industrial exhibition

On the evening of the first congress day, a social gathering including a dinner at the officers' club association is planned to take place.

I'm looking forward to seeing you in Hannover and hope that many colleagues join the congress.

LtCol Dr. Stoetzer

## Wednesday 22. August
